

Enforcement Case Selection Process

Site Assessment and Mitigation
Program

Why Are We Doing Enforcement?

- ◆ To better protect public health and the environment
- ◆ To encourage faster site investigation and remediation

Site Selection Criteria

- ◆ Proximity to known human receptors
- ◆ Receptor ranking
- ◆ Level of threat
- ◆ Lack of action

Proximity to Receptors

- ◆ Sites within 2250 feet of known production wells are being evaluated first
- ◆ This distance could be increased for very high yield production wells

Receptor Ranking

- ◆ The order of priority is public supply wells, then small water systems, then private wells, then beneficial use areas

Level of Threat

- ◆ Is the plume delineated?
- ◆ How high are the contamination levels?
- ◆ How good is our information on the site and geologic conditions?
- ◆ How fast is the plume moving?

Lack of Action

- ◆ Sites that have had no investigative work in over a year have the highest priority
- ◆ Once these initial sites are brought into compliance, we will address sites that are six months out then three months out of compliance

Notification

- RP notification of compliance schedule following determination
- Schedule of compliance must be met to avoid penalties
